* NOTE: This is a 'working draft' sequence. It currently
* consists of 101 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                  Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHCRI Chromosome 7 Mapping Project (Exic D. Green, Director), John D. McPherson in the Droject (Exic D. Green, Director), John D. McPherson in the University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7, send mailto:egreen@nhgri.nih.gov, or see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, B., Tateno, M., Catanese, J.G. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 5:1-8. The clone may be obtained either from and coworkers at the Roswell Park Cancer Institute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The clone sequenced to the left is RP11-1244M4; the clone sequenced to the right is RP13-580H13. Actual start of this clone is at base position 1 of RP11-449P15; actual end is at base position 196204 of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Data from AC091729 was used to finish this clone, AC073957.
Polymorphisms have been identified between AC073957 and AC091729.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Unresolved simple sequence repeats, base positions 26410 to 27787
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Center project name: H_NH0449P15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /organism="Homo sapiens"

Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to obtain the consensus sequence; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                 AC147269
Mus musculus BAC clone RP24-281E6 from chromosome 18, complete

Use of lipoprotein lipase S447X therapeutic for the preparation of a pharmaceutical composition for the treatment of coronary heart disease, atherosclerosis, angina pectoris, hypertension, diabetes, cachexia and

Claim 5; Fig 4; 51pp; English.

The present invention relates to use of a lipoprotein lipase (LPL) S447X therapeutic for the preparation of a pharmaceutical for the treatment of an LPL-responsive condition. Diseases that may be treated are complete LPL deficiency, chylomicronemia, hyperlipidemia, partial LPL deficiency pancreatitis, hypertriglyceridemia, hypoalpha-lipoproteinemia (low high density lipoprotein-cholesterol), cardiovascular disease, coronary heart

This sequence represents a gene encoding a subunit of the cellulose synthase complex of Vigna angularis. The invention relates to subunits cellulose synthetic equipment, that can be used to increase the amount can lose synthesised by a plant. The proteins and genes encoding them can also be used to improve the properties of the cellulose being produced by a plant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This polynucleotide comprises the bacteriocin BacRI operon of Staphylococcus aureus UT007. The sequence of the BacRI operon was determined by N-terminal sequencing of purified BacRI peptide (see AAW54171), with back-translation and plasmid analysis. The BacRI operon includes the BacRI gene (see AAV21510), a homologue of the cylm gene of the cytolysin operon of Enterococcus faecalis whose function is involved bit the maturation of pre-cytolysin, an ATP-transporter gene, biol and biol genes related to lactococcin biosynthesis and modification, and gene involved in immunity function. BacRI peptides can be produced by construction of an expression vector containing an oligomucleotide or operon coding for BacRI, and use of the vector to transform host cells for BacRI expression. The entire BacRI operon has been cloned into
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Therapeutic proteinaceous substances from Staphylococcus aureus - useful to inhibit growth of wide range of prokaryotic or eukaryotic cells, e.g. Moraxella bovis causing infectious bovine keratoconjunctivitis.

   recombinant BacRI peptide into the medium. Bacteriocin BacRI is active against many Gram-positive and Gram-negative organisms such as Bordetella bronchoseptica, Pasteurella multocida and Staphylococcus aureus; Moraxella bovis, causing infectious bovine keratoconjunctivitis, is especially sensitive. BacRI can also be used as an anti-cancer agent. (Updated on 17-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  음
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                 The first intervent of the invention also discloses cells and cell lines that contain the nucleic acids or artificial composemes. The methods of the invention are useful for amplifying chromosomes. The methods of the invention are useful for amplifying nucleic acids in cells, in generating and isolating artificial chromosomes (e.g. mammalian artificial chromosomes or MACS), and in cells with the chromosomes to selected cells and tissues. The artificial chromosomes are useful in gene therapy, gene product production systems, production of humanised genetically transformed animal organs, production of transgenic plants and animals that would employ chromosomal elements of transgenic plants and animals that would employ chromosomal elements as information storage wehicles, for analysis and study of centromere function, for the production of artificial chromosomes. The present companion of the present invention. Note: All N uncleotides (EXCEPT those at positions 21526-21527, 23183, 24977-24977, 28699, 28945, 34074 and 34474) have been added to the sequence by the indexer to match the number of bases this sequence is listing

The methods comprise introducing a DNA fragment comprising a selectable marker into a cell, growing the cell under selective conditions to produce cells that have incorporated the DNA fragment or its portion into a chromosome, and identifying from among the resulting cells those that include a chromosome or its fragment with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            25553 GAGAGACAAGGAGAGAGAGAGAGAGAGAGACAGAGACAGAGAGAGAGACAGACNNNGAA 25494

directed against at least 2 mRNAs selected from target genes, coding and
con-coding regions of RNAs corresponding to target genes, coding and
codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'
codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'
codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'
codons, mixtures. The entisense oligomucleotides may be derived
from sequences AAX55272-74. These multiple target oligomucleotides
conditions or mixtures. These multiple target oligomucleotides
from sequences AAX55180-271) can be used for the antisense treatment of
diseases and conditions. Typical diseases and conditions are those
associated with impaired respiration and inflammation, including lung
diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis,
acute asthma, allergies, asthma, impeded respiration, respiratory
diseases (COPD), and cancers such as leukemias, lymphomas, carcinomas e.g.
colon cancer, breast cancer, lung cancer, panceratic cancer,
colon cancer, breast cancer, lung cancer, melanoma, hepatic metastases,
electronic and an all types of cancers which may metastasize or have metastasized
colon cancer such as all types of cancers which may metastasize or have metastasized

                                                                                                                                                       The invention relates to a method of amplifying a nucleic acid. The method comprises introducing a nucleic acid into a plant cell where the introduced molecule includes a sequence targeting it to an amplifiable region of the cell chromosome then growing the cell and identifying cells that include a chromosome including a portion that has undergone amplification. The targeting sequence is selected from those that target the nucleic acid to the pericentric heterochromatic region of a chromosome and preferably comprises rDNA, an origin of replication, or an nucleic acid (preparing artificial chromosomes) in plant cells. The

The invention relates to preparing cells or cell lines comprising cintroducing a mammalian artificial chromosome that a comprises a nucleic acid encoding a therapeutic product or a gene product into a cell or tissue of a host animal. The artificial chromosome is a mammalian SATAC (satellite artificial chromosome) or a minichromosomes based on cubromatin (e.g. a neo-chromosome and which comprises a neocentromere). The method is useful for preparing cells or cell lines which may be employed in cell-based methods for production of heterologous proteins, gene therapy, or generation of transgenic non-human animals. The cells or cell lines are also useful for cell fusion, as recipient cells for donor DNA encoding a gene or multiple genes, or for delivery of heterologous DNA into cells. The present sequence is the Human ribosomal DNA complete repeating unit, useful for targeting artificial chromosomes to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            25502 ACGACAGAAAGAAAGAGAGAGACAGACAGAAAAAAGACAGAGAGAGAGAGAGAGAGA 25443

                                                                                                                                                                    The present invention relates to a method of identifying a compound that modulates attention deficit hyperactivity disorder (ADHD) in a mammal. The method comprises administering a test compound to an invertebrate, and measuring a foraging behaviour of the invertebrate, where the compound that modulates the foraging behaviour of the invertebrate is characterised as a compound that modulates ADHD in a mammal. The compound treating ADHD, hypertension or other diseases associated with a nitric oxide/CGMP-dependent protein kinase network in a mammal, particularly humans. The method distinguishes a compound that has a specific effect on dependent kinase protein network in a mammal from a nitric oxide/CGMP-abendent brosen in a mammal from a compound that has a specific effect on dependent kinase protein network in a mammal from a compound that has a sassociated with a nitric oxide/CGMP-abendent brosen bressel by present sequence represents a DNA sequence a passociated with a nitric oxide/CGMP-abendent hinser presents a publication or other diseases associated with a nitric oxide/CGMP-abendent hinser present sequence represents a DNA sequence and associated with a nitric oxide/CGMP-abendent hinser presents sequence represents a DNA sequence and associated with a nitric oxide/CGMP-abendent hinser and associated with a nitric oxide/CGMP-abendent hinser as a compound that has a present sequence and associated with a nitric oxide/CGMP-abendent hinser and a nitric oxide/CGM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ŝ

                                                                                                                          This sequence represents a gene encoding a subunit of the cellulose synthase complex of Vigna angularis. The invention relates to subunits cellulose synthesize equipment, that can be used to increase the amount callulose synthesized by a plant. The proteins and genes encoding them can also be used to improve the properties of the cellulose being produced by a plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      for the improvement

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     446
                                                                                                                       The present invention relates to novel pure plant satellite artificial chromosome (SATAC). Sequences of the invention are useful for producing transgenic plants and gene products. They are also useful for cloning a centromere from a plant. The present sequence is human ribosomal DNA (rDNA) repeat region used in the exemplification of the invention
                                               chromosome useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAGCAGAGCCAAAAAGAAGCAGCAAAAAGACCGAAAGACCGCCAGAGCCCAAAAGCCCAAAACC
